SUMMARY

Tech-Savvy QA Automation Engineer with 4+ years of experience in architecting and scaling automation frameworks across web, API, and microservices testing. Proficient in Selenium, Karate, REST Assured, Playwright, and skilled in implementing CI/CD pipelines and cloud-based testing solutions. Comfortable adopting new tools and technologies such as GitHub Copilot and Playwright MCP to improve test design and automation efficiency. Recognized for driving innovation, mentoring peers, and delivering resilient, high-quality releases in fast-paced Agile environments.

SKILLS

Automation Skills: Selenium (Java), Karate Framework (API & Web), REST Assured, TestNG, Maven, Gradle, GitHub Actions, Cucumber BDD, Playwright (Basics)
Testing Skills: UI Testing (Web Applications), API Testing (REST), Regression Testing, Smoke Testing, Sanity Testing, Integration Testing (Microservices), Test Planning, Test Case Design & Execution, Defect Tracking & Reporting
Tools & Technologies: Apache Kafka, Postman, GIT, GitHub, JIRA, AWS (Basic Cloud Knowledge)
Programming & Scripting: Java, JavaScript, SQL, Shell Scripting (Basic)
Soft Skills & Process: Agile, Client Communication, Estimation, Mentoring, Knowledge Sharing

EXPERIENCE

Deloitte USI Consulting July 2021 – Present
Software Test Automation Engineer

- Built an automation framework for a major US supermarket chain using Karate DSL and SQL Server, covering 4 API domains and 3 web applications. The framework achieved 95%+ automated test coverage, drastically reducing manual regression runs and ensuring faster release cycles, enabling the client to confidently adopt frequent production deployments.
- Developed and maintained 20+ automation test scripts per sprint within an Agile Scrum team. Leveraged JIRA for backlog tracking and prioritization, collaborated closely with developers and business analysts to clarify requirements, and consistently ensured on-time QA sign-off for every sprint, directly contributing to a predictable and reliable release cadence.
- Created and executed automated tests for APIs, microservices, and Kafka-based event-driven systems. This ensured robust validation of asynchronous message processing and service integrations, resulting in zero major functional defects being reported in production across multiple releases.
- Implemented CI/CD pipeline automation using GitHub Actions to run daily smoke suites and pull-request scans. Enhanced pipeline security by catching hardcoded credentials and configuration issues early in development. This practice not only improved developer productivity but also ensured compliance with enterprise security guidelines.
- Automated over 300 new test scripts and maintained 3,000+ existing ones for a leading US theme park and resort client. Achieved 80%+ functional coverage of core applications within agreed project timelines, which significantly reduced production defects and improved stakeholder confidence in the release process.
- Automated SLA calculations and reporting processes by building reusable test utilities and reporting jobs. This effort saved approximately 8 hours of manual reporting effort per week for the QA team and ensured consistent, error-free SLA monitoring across all client projects.
- Designed and demonstrated a Proof of Concept (POC) integrating Playwright MCP server with GitHub Copilot to auto-generate and execute test cases. This innovation reduced test case design time by nearly 40%, showcased the feasibility of AI-assisted test automation, and opened opportunities for scaling intelligent automation practices within the organization.

EDUCATION

SRM Institute of Science and Technology
Master of Computer Applications — July 2022 - July 2024
CGPA: 9.39

Madras Christian College
Bachelor of Computer Applications — July 2018 - May 2021
CGPA: 8.15

CERTIFICATIONS

Certified Cloud Practitioner - Amazon Web Services
Credential ID: R3CGCYYJEJ4E1KS3

Docker Essentials - IBM Cognitive Class
Credential ID: 7d5a094b15f749febddf0ac453d13e6d

AWARDS & ACHIEVEMENTS

Applause Award - Deloitte
Recognized for designing and implementing a robust Test Automation Framework that streamlined the QA process for enterprise applications. Additionally, automated daily operational tasks such as status reporting, delivery hours tracking, and SLA calculations, resulting in significant time savings, improved accuracy, and higher productivity across the team.

Hackathon Winner - Freshworks
Built a seamless integration between Freshdesk (CRM) and Basecamp (Project Management tool). The solution enabled agents to access Basecamp tasks directly within Freshdesk, eliminating the need to switch applications. This innovation demonstrated the potential to boost agent productivity by 80% and enhance customer response efficiency.

PERSONAL PROJECTS

API Based Image Classification - https://image-classifier.richardjob.in

- Built a web-based image classification application powered by the Imagga API (third party), enabling users to categorize and tag uploaded images.
- Designed and deployed a scalable backend in Node.js, ensuring efficient handling of API requests and image metadata processing.
- Implemented user authentication and cloud-based storage using Google Firebase, providing secure access and persistent data management.
- Developed the frontend with React.js, leveraging component-based design and state management for a responsive, user-friendly interface.

Guess IT (Basic Android app) - https://www.amazon.com/dp/B081511YQM

- Created an interactive number-guessing game using Java and Android Studio, designed to be lightweight and engaging for casual users.
- Implemented randomized number generation within a user-defined interval, with 10 attempts allowed per game session.
- Published the app on the Amazon App Store, demonstrating experience in the end-to-end mobile app development lifecycle.
